MatCut 700

Glass Fibre – Roll Cutting Machine

Strips in any width directly from machine

Roll material - Such as fiberglass mats, fabrics and nonwovens are produced by the manufacturer in certain standard widths. In many plants, the fiberglass material must be cut to the correct width by hand. Here, the MatCut 700 offers a simple and cost-effective alternative. The rolls are simply placed in the take-up tray - no more pretensioning required - and the desired cutting width is cut under light pressure.

Advantages:

- No stocking of slit material.
- Cost savings due to smaller storage of fiberglass materials.
- Any strip width immediately available.
- Time saving when laminating in the correct width.

Technical data

Time per cut	30" to 2'	Depends on roll diameter and core.
Cutting width	Min. 50mm	Depends on the winding hardness of the roll.
Roll diameter	Max. 700mm	
Measurements	127 x 85 cm	Height: 132cm (mit Bügel) Distance to wall: min. 75cm
Junction	3 x 380 V – 1.1 kW	The engine can also run with 3 x 230 V.
