

MATCUT 700— Glass fibre Roll Cutting Machine

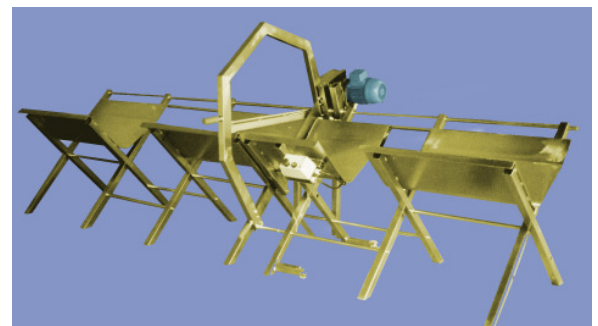

Slit your rolls in the requested widths

Glassfibre-rolls, chopped strand mats, woven fabrics, prepregs and synthetic fleece are usually made in standard width. Most composite manufacturer need the mats in special width. Cutting by hand is time intensive— therefore we developed the Matcut 700. This machine enables you to cut within seconds the requested width. The use is very easy and quick. Try it.

Advantages:

- no stocking of slit material
- Cost saving due to little stock quantity
- every requested width (down to 50 mm)
- Time saving in working process due to optimised width

Technical Data

Time per cut	30 sec to 2 min. depending on roll diameter and core
Width	Minimum width is 50 mm, when using the precision cutting device. The cutting of narrow width depends on the quality of roll. Hard rolls give a better cutting device
Roll	Max. Diameter 700 mm, width of roll depends on the configuration
Specifications	127 x 85 cm, 132 cm high (inkl. bow. When using the machine keep a distance of 75 cm from wall
Junction	3 x 380 V—1.1 kW. The electrical engine can be used also under 220 V.
